TRANSFERABLE SKILLS SHORTAGES

Many skills gaps are due to a deficit of practical skills among workers, including jobspecific skills and operational skills, such as knowledge of the organisation's products and services. Complex analytical skills, such as problem solving, plus digital skills at a variety of levels, as well as basic skills (functional literacy and numeracy) are also in deficit.

TRANSFERABLE SKILLS SHORTAGES

A lack of the required “soft” skills is more common across the workforce, including “self-management” skills such as time management and managing own feelings, plus team working and persuading / influencing others. Management, whether it be aspects of self-management or leading / managing staff within the organisation, is a key element of skills gaps, together with sales and customer handling skills.
